shashi

Role Snapshot

- Company: Nimbus Telecom
- Role: Senior SDET

Top 10 Likely Interview Questions

1. Describe your experience with Java-based automation frameworks.
2. How have you implemented Selenium WebDriver in your previous projects?
3. Explain your approach to REST API testing.
4. What is your experience with Jenkins for CI/CD automation?
5. How do you design and maintain regression test suites?
6. Can you discuss a challenging automation problem you solved?
7. How do you ensure test reliability and minimize flaky tests?
8. Describe your process for integrating automated tests into CI pipelines.
9. What tools have you used for API testing and why?
10. How do you collaborate with developers and other QA team members?

Suggested Answer Pointers

- Highlight building and maintaining Selenium WebDriver and TestNG frameworks.
- Discuss using Java for automation scripting and framework development.
- Mention designing REST API regression suites with Rest Assured and Postman.
- Explain integrating test automation into Jenkins CI pipelines.
- Describe using Git for version control and collaboration.
- Focus on practical approaches to test reliability and troubleshooting.
- Emphasize teamwork and communication with cross-functional teams.
- Reference ISTQB Foundation Level certification for structured QA practices.
- Share experience from Comviva Technologies as Senior QA Engineer.
- Stay factual—avoid unverified tools or achievements.

Technical Focus Areas

- Java programming for automation
- Selenium WebDriver framework design and execution
- REST API testing with Rest Assured and Postman
- Jenkins CI/CD pipeline integration
- TestNG for test management
- Version control with Git
- SQL for test data validation

Behavioral Questions (STAR-ready)

- Describe a time you led a QA automation initiative.
- How do you handle tight deadlines or shifting priorities?
- Give an example of resolving a conflict within your team.
- How do you keep up with new automation tools or trends?
- Describe a situation where your testing prevented a major issue.

Resume Deep-Dive Questions

- Explain your role and key achievements at Comviva Technologies.
- Detail your experience building Selenium WebDriver frameworks.
- Discuss your approach to designing REST API regression suites.
- Describe how you integrated automation into Jenkins CI pipelines.

- Clarify your contributions as a Senior QA Automation Engineer.

Gaps and Risk Areas

- Limited explicit detail on scale or complexity of Selenium and API automation projects.
- No direct mention of SDET title or responsibilities in prior roles.
- JD expects strong SDET identity; resume focuses on QA Automation Engineer.
- No quantified impact or metrics provided.
- Potential need to elaborate on end-to-end ownership and leadership experience.

30-60-90 Day Readiness Plan

- 30 Days: Understand Nimbus Telecom's automation architecture, review existing frameworks, and onboard with the QA/dev teams.
- 60 Days: Contribute to enhancing test automation suites, integrate tests with Jenkins CI/CD, and identify quick wins for reliability.
- 90 Days: Lead end-to-end automation initiatives, propose improvements, and mentor junior team members on best practices.

Questions to Ask the Interviewer

- What are the current challenges in your automation processes?
- How is success measured for the Senior SDET role?
- What is the team structure and how does QA collaborate with development?
- Which frameworks and tools are currently in use for automation and CI/CD?
- Are there opportunities to introduce new tools or practices?
