

Cover Letter - Software Developer in Test (SDET) – Mobile, Web & API Automation-REMOTE

Dear Hiring Team,

I am writing to express interest in the Software Developer in Test (SDET) – Mobile, Web & API Automation-REMOTE opportunity at Cognizant. The role stands out because it emphasizes SDET, Java, TestNG, Postman, which matches the verified experience I have built as a Senior QA Automation Engineer.

Across my background, I have focused on Java, TestNG, Postman, Jenkins, Git. 5+ years of experience as Senior QA Automation Engineer, tailored toward Software Developer in Test (SDET) – Mobile, Web & API Automation-REMOTE for Cognizant. Emphasizes verified strengths in Java, TestNG, Postman, Jenkins, Git while staying aligned to the target job requirements. That evidence-backed alignment is the main reason I believe I can contribute effectively in this position.

What makes this opportunity especially relevant is the overlap between the job description and the work I can support today: SDET, Java, TestNG, Postman. I would bring a practical, quality-focused approach grounded in the experience already reflected in my resume. I am also aligned with the role's location and work-mode expectations in Mangum, NC. I am careful to present my fit honestly, including where the role asks for depth that would need to be demonstrated in discussion rather than overstated in writing.

Thank you for your time and consideration. I would welcome the opportunity to discuss how my background can support Cognizant's goals in the Software Developer in Test (SDET) – Mobile, Web & API Automation-REMOTE position.

Sincerely, Shashidhar Yadala
