[GitHub — Load Testing Platform](#)

PROFILE SUMMARY

QA professional with 4.5+ years of experience across manual, automation, and performance testing in fintech and enterprise software domains.

Currently at Comviva Technologies, owning test automation, load/ performance testing (JMeter), manual testing, and direct client management across releases.

Built an AI-assisted Load Testing Platform using Claude (published on GitHub), applying Generative AI to QA workflows.

SHINING STAR award (Dec 2022) for exceptional performance, ownership, and accountability.

TECHNICAL SKILLS

Automation: Selenium WebDriver, TestNG, Maven, REST Assured (API)

Performance: Apache JMeter — load, stress, endurance testing

Testing Types: Functional, Regression, Integration, Smoke, Sanity, GUI, Mobile (Android), UAT, Exploratory, Compatibility

Database: SQL — data validation & translation checks

Tools: Git, JIRA, TFS, CI/CD pipelines, Postman

Generative AI: AI-assisted test tooling with Claude

Platforms: Windows, Linux, Mac, Android

CORE COMPETENCIES

Software Testing Lifecycle

Test Planning & Estimation

Software Quality Assurance

Defect Tracking & Prevention

Client & Stakeholder Management

SHASHIDHAR YADALA

QA Engineer | Automation • Performance • Manual Testing

PROFESSIONAL EXPERIENCE

QA Engineer, Comviva Technologies Limited

05/2025 – Present | Bengaluru

- Owning end-to-end QA for client engagements — automation, performance, and manual testing across telecom/digital platform releases.
- Designing and maintaining Selenium + TestNG automation suites for web applications, reducing regression cycle time by 3 hours in every sprint.
- Performing load and performance testing using JMeter — designing test plans, simulating concurrent user loads, analyzing throughput/response times, and reporting bottlenecks.
- Executing functional, regression, integration, and sanity testing across release cycles with strict deadline adherence.
- Managing client communication directly for 3 concurrent client engagements — requirement clarification, status reporting, UAT coordination, and sign-off.
- Conducting API testing to validate functionality, reliability, and performance of backend services.
- Developed an AI-assisted Load Testing Platform (Claude + GitHub) to streamline performance test setup and analysis.

Software Test Engineer, Craft Silicon Pvt Limited

06/2023 – 05/2025 | Bengaluru

- Owned test management end to end — planning, strategy, test case design/execution, and risk & defect management.
- Automation testing of web applications using Selenium and TestNG; mobile app testing on Android; system acceptance testing.
- Database testing with SQL — validating data flow to tables against data translation rules.
- API testing for functionality, reliability, performance, and security of services.
- Managed client relationships — gathering requirements, addressing concerns, and ensuring satisfaction.

Test Engineer, Tescra Software Solutions

11/2021 – 05/2023 | Bengaluru

- Evaluated, selected, and deployed bug tracking and requirements management tooling.
- Managed testing across the lifecycle — planning, strategy, scripts/cases, execution, and risk & defect management.
- Performed Selenium automation plus Functional, Regression, Integration, Sanity, Smoke, GUI, API, UAT, and Performance testing.
- Defined and tracked quality metrics; produced traceability matrices, defect trend charts, and metric reports.

PROJECTS

Load Testing Platform (AI-assisted) — github.com/Shashidhar9738/Load-testing-Platform

- Built a load-testing platform with Claude (Generative AI) to configure, run, and analyses performance tests with a simplified workflow.
- Demonstrates practical application of AI tooling to accelerate QA/performance engineering tasks.

EDUCATION & CERTIFICATIONS

- B.E. (Mechanical Engineering), Southeast Asian College of Engineering, Bangalore — 2020
- Core Java, Manual & Automation Testing — Q-Spiders Software Testing Training Institute
- API Testing — Moolya
